- BLF (optional)
- Cloud based voice recording (optional)

Enterprise Mobility

Be There - No Matter Where You Are !

Extending the power of communications to your smartphone by gTalk PBX app

gTalk's built-in mobility features are designed to overcome the challenges of device agnosticism by providing secure and reliable access to the company resources-anytime, anywhere, on any device-regardless of whether the device is owned by the company or the employee. gTalk's enterprise mobility functionality allows your workforce to become more productive by eliminating travel times and giving them the freedom of bringing their own devices (BYOD), which ultimately reduces the equipment costs for the organization. With gTalk PBX your employees can access full communications platform using mobile devices of their choice, from any location (office, home, hotspots), and on any network (WiFi , 3G/4G LTE).

Key Benefits for Businesses

Reduce costs with BYOD

Reduce equipment costs for your organization by adopting Bring You Own Device (BYOD) schemes. Your employees can stay connected to company communications at all times using their own mobile devices whenever, wherever.

Boost Productivity

Less travel time means more time spent on business tasks. Why have your employees go through long commutes when they can stay equally productive outside the office. Boost productivity of your organization by providing your employees with the independence and flexibility to stay connected to company communications from anywhere, anytime.

Accelerate Sales

Closing a sale has a lot to do with customer confidence. Customers appreciate one-call resolution and timely response to inquiries. An integrated mobile workforce can greatly contribute to sales closures, solving problems, responding to urgent requests more efficiently and building customer satisfaction. Earning customer confidence can ultimately win more sales, service calls and contracts.

Remain Competitive in Your Industry

Enterprise mobility is not just a buzz word but a necessity for modern day enterprises. Adopting current technology trends keeps your organization at the cutting edge of best business practices and keeps your business processes up-to-date helping you maintain an edge over your competition.
